XTRA economical *heating* is dear to our heart!

XTRA HEAT STORAGE TECHNOLOGY UP TO 12 HOURS OF XTRA WARMTH

A further development of the proven Heat Memory System: We combine the Heat Memory System with a special heat exchanger, pack more than 100 kg of it into the stove and equip the latter with convection air that can be adjusted and even shut off. When ready the heat storage is up to 12 hours!

XTRA EFFICIENT AND SUSTAINABLE WARMTH

Stoves with our Xtra storage technology not only warm the room for significantly longer than conventional models, they also heat up especially quickly. This is clever and efficient at the same time, because this way a pleasant room environment is ensured.

THE FIGURES SPEAK FOR THEMSELVES:

With less than **nine kilos of wood** you can provide your living spaces **for up to** with pleasant and environmentally-friendly warmth.

Another benefit is the adjustable convection air, which can be shut off and which enables a particularly even output of heat. This makes it possible to use the air movement to control or even reduce the heating in the room entirely as required

All Austroflam **XTRA STOVES** are fitted as standard with more than 100 kg **XTRA** storage mass!
